

HCG is currently celebrating 25 years in business. We are recognized as leaders in California for providing high quality Civil and Structural Engineering services. Our goal is to design structures at the most reasonable costs while insuring the highest levels of safety. We always keep open lines of communication with our clients so that projects move smoothly and according to schedule.

Your Engineering Partner...

- Structural Engineering

Innovative Engineering for your Building

INTRO

HCG Associates, Inc. provides civil and structural engineering services to clients throughout California. Our success over the past 25 years has been achieved by delivering high quality services to our clients.

SERVICE

We've kept open lines of communications throughout a project's life cycle and most clients has told us this is what they like most about working with HCG.

By keeping communication channels open, we are able to deliver services that always stay on track. This also helps minimize the risk of delays in construction.

QUALITY

HCG's staff is comprised of licensed civil and structural engi-

neers. Our senior engineers have many years of experience working on large structures and developments such as headquarters buildings, manufacturing plants,

multi-family development, retail stores, commercial buildings, churches, and more. All work is performed in conformance with the California Building Code (CBC) along with other requirements needed to insure that structures are built to a high level of safety.

METHODOLOGY

HCG staff works in teams with a senior engineer always supervising the work of other members. We strive to clearly identify the scope of each project and then provide a clear list of deliverables in our contracts.

All services are delivered with adherence to buildings codes provided by government institutions such as FEMA, state codes such as the California Building Code and local city ordinances.

SUMMARY

With 25 years of engineering experience, HCG has gained a reputation for providing great service and high quality work. Please contact us the next time you have a need for professional engineering services.
